DOMINION GAS

Dominion Gas
Aberdeen, Stavanger,
West Africa, Singapore

Dominion Gas – Raising the standard

Dominion supplies gases and gas related equipment, primarily, to the offshore oil and gas industry around the world. We are proud of our reputation for providing high quality products and services that continue to set industry standards.

Established in 1987, Dominion Gas is an international industrial cylinder gas specialist supplying the full range of diving, welding, industrial, laboratory, test and calibration gases, as well as liquid cryo gas tanks and offshore chemical tanks.

Our largest market is in the North Sea, which we service from our Aberdeen headquarters, and from our Stavanger production plant in Norway. We also have a production plant in Singapore covering the South Asia, and Pacific market and have recently established a plant in Gahna West Africa.

Innovation, and excellence

Dominion Gas is constantly striving for innovation, and excellence.

We have recently completed a very successful acquisition of Argon ISO tank Ltd which further strengthens Dominion Gas internationally.

We pride ourselves in our relentless customer focus and support, expressed through our slogan:

Dominion Gas - Raising the Standard.

Products & Services

Dominion Gas offers a wide range of single cylinders, tube skids, egg skids and cylinder quads, and we can supply 300 bar gas mixtures to order. We also supply Offshore Cryo and transport tanks for both gases and chemicals. Our experienced sales and production staff are happy to discuss any requirements or applications you may have. Dominion recognises that the integrity and quality of our equipment ensures the safety of our customers and staff. The maintenance of our equipment is essential to retain the trust of our customers. All gas equipment meets the specifications, standards and design requirements for UK and worldwide transportation (including DNV Norge).

Cylinder Asset Tracking System (CATS)

Dominion uses **Cylinder Asset Tracking System (CATS)** to manage all aspects of equipment integrity. Certification and testing requirements are programmed into the CATS system to ensure that testing is carried out when necessary and that no item is permitted to be used unless it is in test.

CATS monitors individual cylinder movements at every stage with total electronic data collection.

CATS works through a unique serial number and barcode on every cylinder to give you access to:

- Real-time safety and financial data
- Gas and cylinder records by individual barcode and serial number
- Gas and rental invoicing by the day
- Sales orders and quotations
- Transparent accounts

This information is available onshore and offshore in any office, platform, rig or vessel with Internet access.
